PROJECTS

- ***Movie Recommendation System***
  - Built a content-based movie recommender in Python (scikit-learn) using TF-IDF vectorization and cosine similarity to rank the top-30 similar titles
  - Cleaned and fused metadata (genres, keywords, tagline, cast, director) with pandas; added fuzzy title matching (difflib) to handle user typos.
  - Precomputed a movie-to-movie similarity matrix and added error handling to deliver fast, reliable recommendations.

- ***Matrix Cipher Encoder/Decoder (Python)***
  - Developed a command-line tool to encode and decode messages using the Hill cipher (matrix-based classical encryption).
  - Implemented matrix operations (including modular arithmetic and matrix inversion) using NumPy.
  - Designed a user-friendly interface for key input, message padding, and error handling.
  - Demonstrated understanding of cryptographic concepts and Python programming.
